Subject: R8 RRT - pipeline security incidents/concerns

Good Morning RRT Members and Participants,

You likely have heard by now that there were four pipeline security incidents in recent weeks. These incidents involved environmental activists who closed manual pipeline valves, thus stopping the flow within the pipelines. Fortunately, these incidents did not result in a discharge of oil because steps were taken to prevent the pipelines from over pressuring.

In light of these incidents, our OSC Phone Duty Officers (PDOs) will assess and verify all pipeline reports that are made and will immediately notify the appropriate state agency, and others as appropriate to ensure stakeholders have visibility on the incident. We ask that you, our RRT representatives, also notify us of any pipeline incident reports that you receive. Our PDOs can be reached directly at 303-293-1788.

Also, you should recall R8 revamped its area planning efforts several years ago. Historically, Sub-Area Contingency Plans (SACPs) covered only short segments of a few rivers in the region. Now the region is organized into 10 watersheds and in each we have assessed the worst case discharges from fixed FRP

facilities and pipelines. This has been the basis around which we've identified response strategies/priorities, control points (booming and collection locations), equipment caches, and river access points in conjunction with the pipeline, storage and transportation companies. Our OSCs have coordinated with numerous federal, state, local, tribal and industry partners on this effort, including DOT/PHMSA. In light of these recent incidents, nationwide, and in Region 8, EPA and the U.S. Coast Guard are working proactively with DOT/PHMSA and other agencies to coordinate and prepare for any future similar incidents.

On behalf of our RRT8 Co-Chairs, David Ostrander and Michael Sams, I encourage you to use this alert to take the appropriate steps within your organization. We have confidence that we are ready to respond to such an incident, as demonstrated so often from past pipeline incidents.

Regards, Gina

Subject: RE: R8 RRT - pipeline security incidents/concerns

Hello Everyone,
I've received a few questions about the locations of the incidents and thought I'd relay to the whole group...

Here is a link to a Reuters article on the incident: <http://www.reuters.com/article/us-usa-canada-pipelines-idUSKCN12B26O>

It states that three activists were arrested in Washington and one in Montana, which is where the incidents occurred, I believe. The article mentions other associated arrests made in Minnesota and North Dakota. I don't have any more details than that at this time.

Thanks, Gina

I believe this is a separate incident that took place on a line in South Dakota that was transporting tar sands from Alberta to Wyoming.

Apparently vandals or some nefarious group turned off a valve in the hope that the line would overpressure and spring a leak.

Thanks Justin. We had a national call and there was mention that FEMA was getting engaged, along with Justice and the FBI. But maybe that was just chatter.

We are supposed to summarize for the WH NSC staff EPA's readiness to respond to pipeline discharges and look at our regional contingency plans to see about gaps etc. I'll let you know if anything further comes of it. This may be more in DOT/PHMSA's lane in terms of pipeline security.

Subject: ND pipeline protests

Justin, not aware of a particular SD incident today but we have been monitoring the pipeline protests taking place near the Standing Rock Sioux Reservation in ND/SD. There is no FEMA involvement on this. The only FEMA discussion that headquarters was working was in the congressional arena since an influential senator from ND was very vocal about needing federal help funding local and state police supporting the protests.
